

CraftCart Gap Analysis

Identifying critical gaps between current state and desired state to drive business growth and operational excellence

What is Gap Analysis?

Gap analysis is a strategic tool that identifies the difference between the current **AS-IS process** and the desired **TO-BE state**, helping organizations define precisely what changes are required to achieve their business goals.

It bridges the gap between where you are today and where you want to be tomorrow, providing a clear roadmap for transformation and measurable outcomes.

Payment System Gaps

Payment Failure Handling

AS-IS: No retry mechanism

TO-BE: Auto retry with alternate gateway

Gap: Missing retry logic leads to high cart abandonment and frustrated customers

Payment Options

AS-IS: Limited payment methods

TO-BE: UPI, Wallets, BNPL support

Gap: Lack of payment diversity results in lost customers and missed revenue opportunities

Real-Time Visibility

AS-IS: No status updates

TO-BE: Real-time transaction tracking

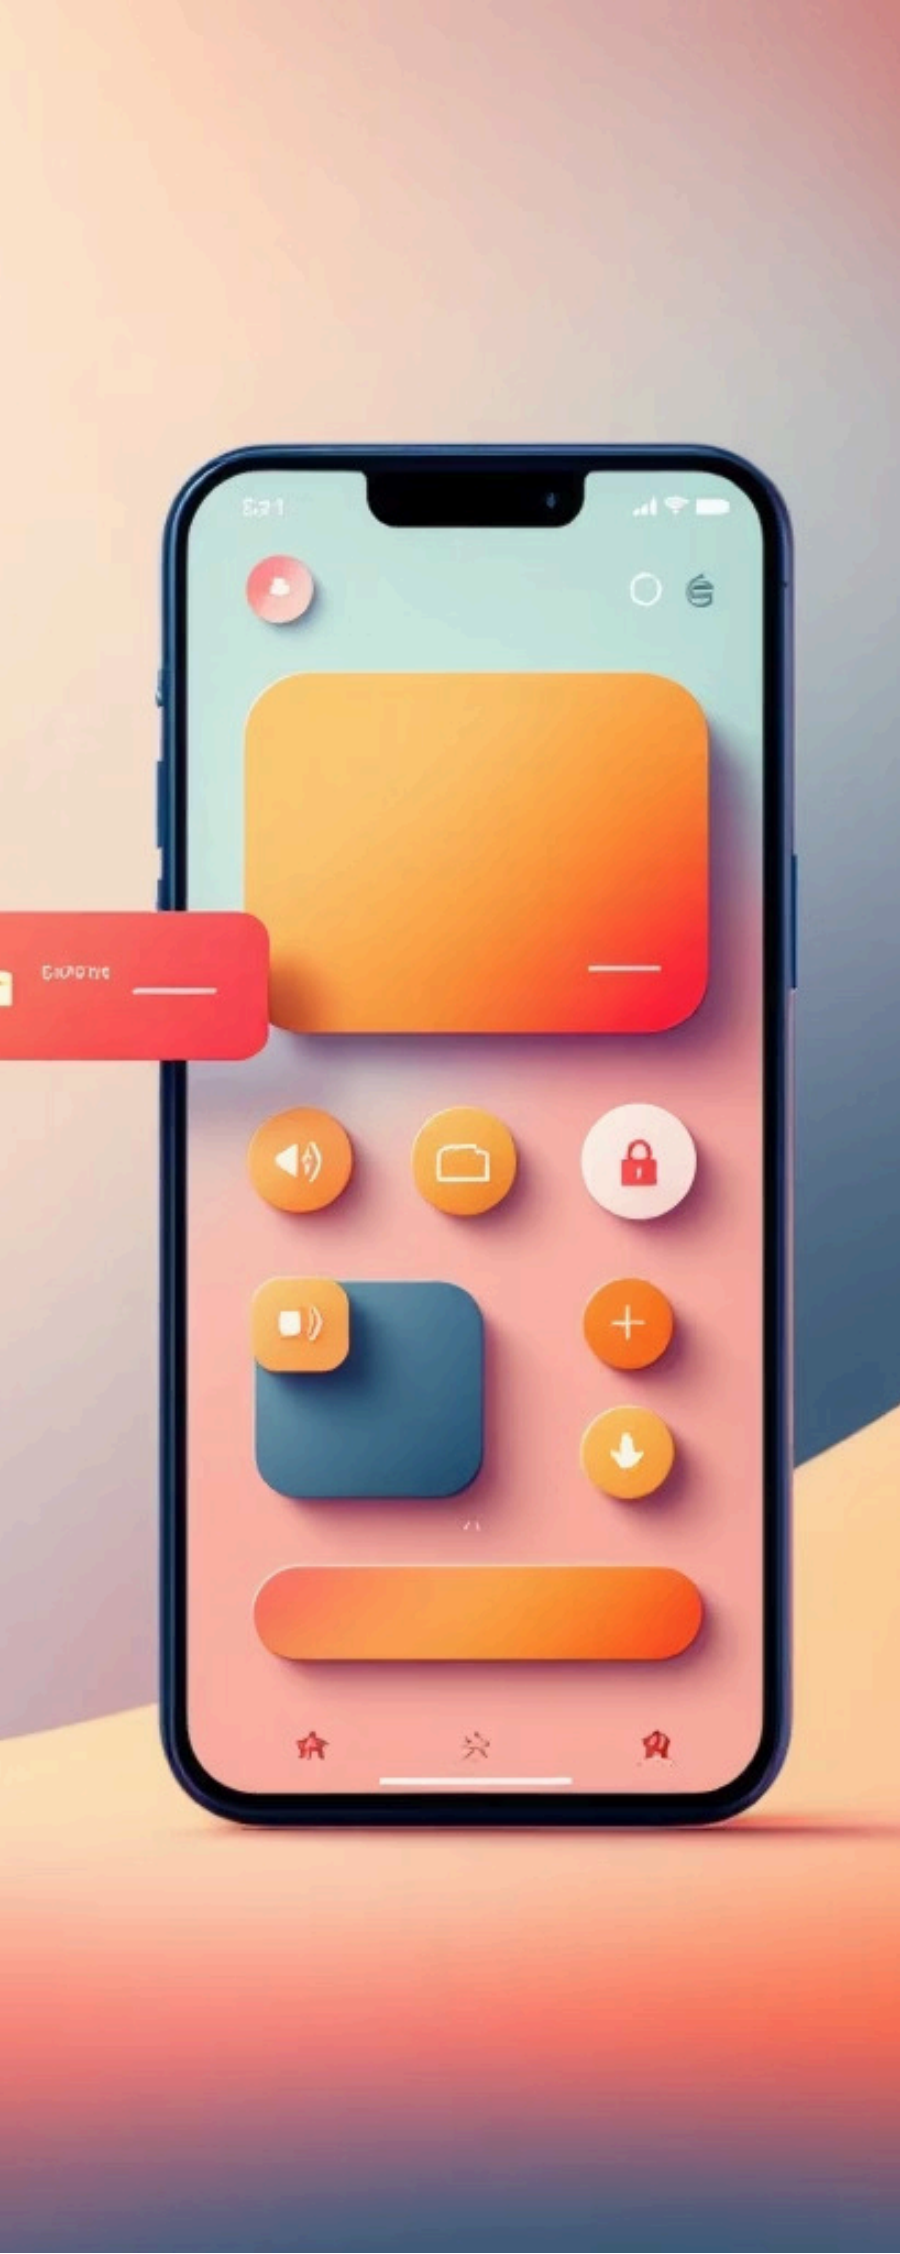

Gap: Poor feedback system causes customer confusion and support burden

Error Handling

AS-IS: Weak error management

TO-BE: Smart error handling system

Gap: No proper messaging increases support tickets and resolution time

Inventory Management Gaps

Real-Time Inventory Visibility

Current: Not real-time tracking

Target: Real-time sync across all channels

Impact: Overselling products and disappointing customers

Inventory Reservation

Current: Not available

Target: Temporary lock during checkout

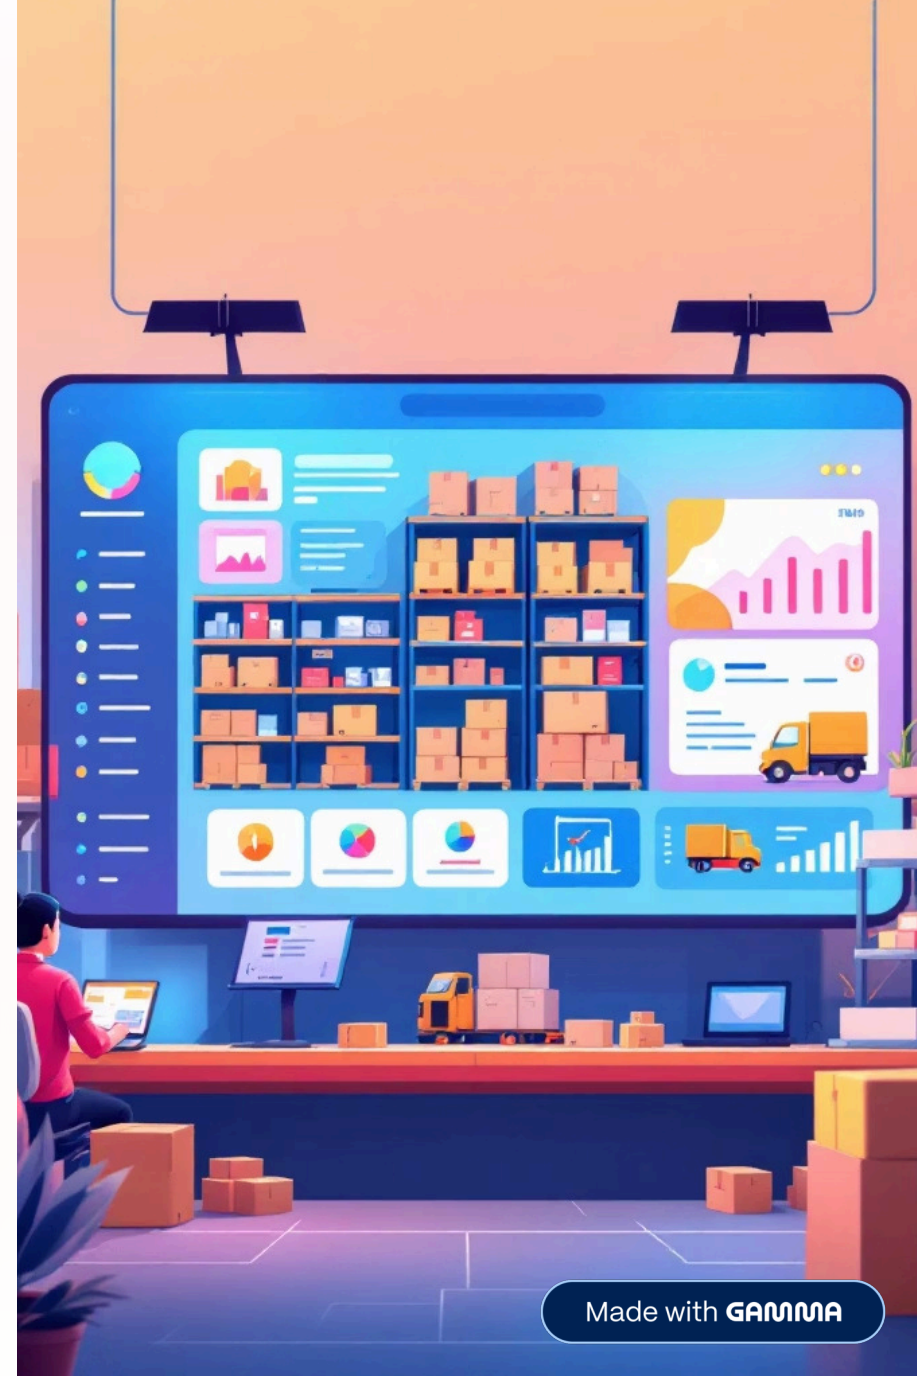

Impact: Order cancellations due to stock issues

Automated Inventory Sync

Current: Manual updates required

Target: Fully automated synchronization

Impact: Stock mismatches and operational inefficiency

Seller Management Gaps

Order Confirmation

AS-IS: Manual process

TO-BE: Automated notification system

Gap: Lack of automation causes processing delays

Processing Workflow

AS-IS: Manual SLA-based

TO-BE: Structured workflow with timelines

Gap: No defined timelines leads to inconsistent fulfillment

Seller Training

AS-IS: Limited training

TO-BE: Structured onboarding program

Gap: Lack of enablement causes errors in processing

Logistics & Fulfillment Gaps

Logistics Assignment

Current: Manual assignment

Target: Auto assignment system

Impact: Delays in order processing and fulfillment

Pickup Scheduling

Current: Unstructured approach

Target: Scheduled system with planning

Impact: Delivery delays and route inefficiency

Delivery Tracking

Current: Limited visibility

Target: Real-time tracking for customers

Impact: Poor customer experience and trust issues

System & Technology Gaps

System Integration

AS-IS: Weak integration

TO-BE: Fully integrated system

Gap: Siloed architecture causes operational inefficiency

Scalability

AS-IS: Limited capacity

TO-BE: High scalability

Gap: Not designed for peak load results in system crashes

System Reliability

AS-IS: Frequent failures

TO-BE: 99.9% uptime

Gap: Weak infrastructure leads to revenue loss

Customer Experience Gaps

Checkout Experience

Current: Complex multi-step process

Target: Simplified, intuitive flow

Impact: Poor UX leads to high drop-offs

Communication

Current: Reactive notifications

Target: Proactive alerts and updates

Impact: No alerts causes confusion

Customer Support

Current: Slow manual responses

Target: AI chatbot with instant support

Impact: Lack of automation creates bad experience

Business Impact Overview

Revenue Loss

System crashes, payment failures, and cart abandonment directly impact top-line revenue

Customer Churn

Poor experience, lack of visibility, and communication gaps drive customers away

Operational Inefficiency

Manual processes, siloed systems, and lack of automation increase costs

Key Takeaways

01

Payment System

Implement auto-retry logic, expand payment methods, and add real-time status updates

02

Inventory Management

Enable real-time sync, temporary reservation, and automated inventory updates

03

Seller Operations

Automate order confirmation, define SLA workflows, and implement structured training

04

Logistics & Tech

Auto-assign deliveries, enable tracking, integrate systems, and ensure scalability

05

Customer Experience

Simplify checkout, enable proactive communication, and deploy AI-powered support
