

Solution Mapping: From Gaps to Growth

A strategic framework for transforming identified challenges into actionable solutions that drive business transformation

What is Solution Mapping?

Solution mapping is the strategic process of translating identified gaps from the current state into structured business, process, and technical solutions that enable the desired TO-BE state.

It serves as the critical bridge between gap analysis and implementation—transforming "what is broken" into "how we fix it."

The CraftCart Transformation

CraftCart's solution mapping addresses critical gaps across six key layers, each designed to improve operational efficiency, customer experience, and revenue growth.

Let's explore how each solution directly impacts business outcomes.

● Payment System: The Revenue Layer

Problem

Transaction failures, limited payment options, and poor visibility directly impact revenue streams

Solution

Auto-retry with alternate gateway, UPI integration, wallets, BNPL options, real-time updates, smart error handling

Impact

Reduces cart abandonment, improves payment success rate, builds customer trust

Inventory Management: Accuracy First

1

The Challenge

Overselling and order cancellations erode customer trust and seller credibility

2

The Solution

Real-time inventory system with temporary lock and automated API sync

3

The Outcome

Order reliability, prevents revenue leakage from stock mismatches

● Seller Management: Ecosystem Efficiency

Automated Notifications

Instant order alerts keep sellers informed and responsive

SLA Workflows

Performance-based escalation ensures accountability

Training Programs

Onboarding support improves seller capability

Result: Improved seller performance and a more reliable marketplace ecosystem

● Logistics & Fulfillment: Delivery Excellence

The Gap

Logistics inefficiencies cause delayed deliveries and poor customer experience

Key Solutions

- Auto logistics assignment optimizes routing
- Scheduled pickups reduce delays
- Real-time tracking provides complete transparency

Impact: Faster deliveries and complete order visibility

Technology: The Scalability Backbone

Cloud Infrastructure

Elastic scaling handles traffic spikes during peak periods without downtime

Microservices Architecture

Independent services enable faster development and deployment cycles

High Availability

99.9% uptime ensures consistent performance and reliability

Outcome: Technology infrastructure ready for scale, performance, and future expansion

● Customer Experience: Retention Layer

01

Simplified 2-Step Checkout

Reduces friction and accelerates purchase completion

02

Automated Notifications

Keeps customers informed at every order milestone

03

AI Chatbot Support

24/7 assistance resolves queries instantly

Result: Enhanced user experience, improved retention, and built-in trust

Solution Mapping: The Strategic Advantage

6

Key Layers

Critical business areas addressed

100%

Revenue Impact

Payment success rate improvement

99.9%

System Uptime

Reliable platform availability

Solution mapping transforms gap analysis into implementation—creating a clear roadmap from current challenges to measurable business outcomes. Each layer builds upon the other, delivering compounding returns across revenue, operations, and customer experience.
