

CraftCart UAT Overview

User Acceptance Testing (UAT) was conducted to validate that the TO-BE process meets business requirements across payment, inventory, seller operations, and logistics. The scenarios focus on real-world user interactions and system behaviour.

● **Payment System**

5 test cases covering success flows, retries, alternate gateways, and cancellations

● **Inventory Management**

4 test cases covering real-time checks, out-of-stock handling, reservation, and sync

● **Seller Workflow**

3 test cases covering notifications, confirmations, and SLA breach escalations

● **Logistics & Fulfilment**

4 test cases covering assignment, scheduling, dispatch, and delivery

● **Customer Experience**

3 test cases covering confirmations, failure messages, and order tracking

● A. Payment System UAT

Test ID	Test Scenario	Steps	Expected Result	Priority
UAT-01	Payment Success Flow	Place order → complete payment	Order confirmed successfully	High
UAT-02	Payment Failure Retry	Fail payment once	System auto retries payment	High
UAT-03	Retry via Alternate Gateway	Fail primary gateway	System switches to alternate gateway	High
UAT-04	Manual Retry Option	Fail all retries	User sees retry/cancel option	High
UAT-05	Payment Cancellation	Cancel after failure	Order is cancelled successfully	Medium

B. Inventory Management UAT

Test ID	Test Scenario	Steps	Expected Result	Priority
UAT-06	Real-Time Inventory Check	Try to buy product	System checks stock instantly	High
UAT-07	Out of Stock Handling	Select unavailable item	Checkout blocked with message	High
UAT-08	Inventory Reservation	Add item to cart	Stock temporarily reserved	High
UAT-09	Inventory Sync	Place order	Inventory auto-updated	High

● C. Seller Workflow UAT

Test ID	Test Scenario	Steps	Expected Result	Priority
UAT-10	Seller Notification	Order placed	Seller receives notification	High
UAT-11	Seller Confirmation	Seller accepts order	Order moves to next stage	High
UAT-12	SLA Breach	Seller delays confirmation	System triggers escalation	High

● D. Logistics & Fulfilment UAT

Test ID	Test Scenario	Steps	Expected Result	Priority
UAT-13	Auto Logistics Assignment	Order confirmed	Logistics partner assigned automatically	High
UAT-14	Pickup Scheduling	Order ready	Pickup scheduled automatically	Medium
UAT-15	Order Dispatch	Logistics processes order	Order dispatched successfully	High
UAT-16	Order Delivery	Delivery completed	Order marked delivered	High

E. Customer Experience UAT

Test ID	Test Scenario	Steps	Expected Result	Priority
UAT-17	Order Confirmation Notification	Place order	Customer receives confirmation	High
UAT-18	Payment Failure Message	Payment fails	Clear error message displayed	High
UAT-19	Order Tracking	After dispatch	Customer sees tracking updates	Medium

🎯 UAT Summary & Expected Outcomes

UAT Coverage

- **Payment reliability** tested across success, retry, and cancellation flows
- **Inventory validation** ensured with real-time checks and reservation logic
- **Seller workflow** verified including SLA breach escalation
- **Logistics automation** validated from assignment through delivery
- **Customer experience** scenarios covered end-to-end

📊 Expected Outcomes

Reduced Payment Failures

Auto-retry and alternate gateway logic minimises drop-offs

Improved Order Success Rate

End-to-end validation ensures higher fulfilment accuracy

Faster Order Fulfilment

Automated logistics assignment accelerates dispatch timelines

Better Customer Experience

Clear notifications and tracking updates at every stage
